#### HTRAC All-Wheel Drive

HTRAC is an electronic all-wheel drive system that automatically detects vehicle's speed and road conditions to control braking between the left and right wheels and apply active torque control between the front and rear axles, in order to ensure stability while driving and cornering on slippery roads.

#### 6-airbag System

A 6-airbag system with front, thorax, pelvis, side and curtain airbags offers broad collision protection. Advanced frontal airbags determine when and how to deploy pressure in an accident by sensing occupant's position, seat belt use and the severity of the crash.

#### Wireless Smartphone Charging System

#### Integrated Memory System (IMS)

#### Blind-Spot Collision-Avoidance Assist (BCA)

Radar sensors in the rear bumper are used to warn the driver of approaching vehicles in the blind spot area and activate the brakes when there is a collision risk in lane changing maneuvers.

#### Surround View Monitor (SVM)

A multi-camera system provides a 360-degree view around the vehicle to assist the driver in parking situations.
